

**Required Tools: (Not included)**

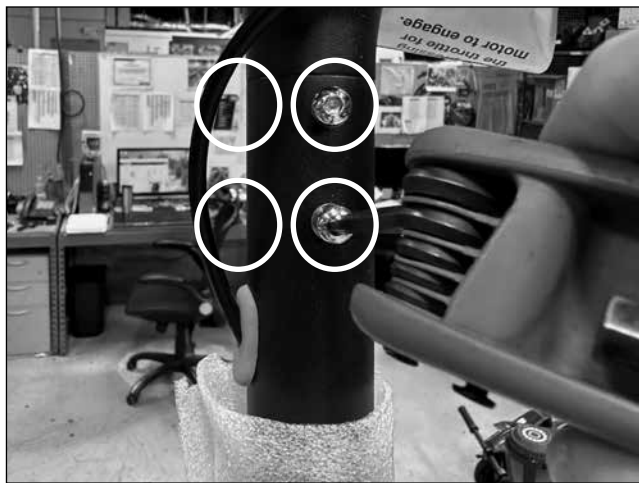

- A. 4 mm Allen wrench
- B. 3 mm Allen wrench
- C. Small flat screwdriver
- D. Phillips screwdriver

**⚠ WARNING**

**⚠ CAUTION:** To avoid potential shock or other injury, turn power switch OFF and disconnect charger before conducting any assembly or maintenance procedures. Failure to follow these steps in the correct order may cause irreparable damage.

**Step 1**

Using a 4 mm Allen wrench, loosen and remove the four (4) bolts that secure the handlebar to the stem. Pull the handlebar out from the stem.

**Step 2**

Locate and disconnect the handlebar connector from the main line.

### Step 3

Using a 3 mm Allen wrench, loosen the set screws under the throttle and move it away from the grip.

### Step 4

Using a small flat screwdriver, insert the blade between the grip and the handlebar. Apply a few drops of WD40® or soapy water and remove the screwdriver. Pull firmly on the grip to remove it from the handlebar.

### Step 5

With a small flat screwdriver, insert the blade below the cover of the power display. Use the screwdriver to carefully go around the power display and pop the cover off.

### Step 6

Using a Phillips screwdriver, remove the four (4) screws holding the PC board display. Carefully lift up the PC board display.

## Step 7

Locate and disconnect the throttle connector from the PC board display.

## Step 8

Remove the throttle connector from the handlebar tube and slide the throttle out from the handlebar.

## Step 9

To install a new throttle, reverse steps 1-8.

**ATTENTION: Charge battery 12 hours before using.**
